INNOVATIVE FIRE PRODUCTS

Another Reason Our New Jumbo Gear Bag [RC-15563] is a Better Buy:

DURABILITY

Think of a hammock – outside all the time, in glaring sun, heat, wind and rain. Chances are, it is made from DuraCord®. Top manufacturers know that for durability and looks, nothing beats DuraCord® - a man-made fabric that **provides the soft feel of cotton while maintaining superior durability and performance.**

Most gear bags in its price range are nylon – our jumbo gear bag is DuraCord®

Why DuraCord®? DuraCord® fabric is:

- **Abrasion Resistant** - Other synthetic yarns do not stand up to any abrasion and are not suited for the wear and tear of outdoor living. DuraCord® lasts under rough use.
- **Stain Resistant** - DuraCord® resists staining due to its nonabsorbent properties.
- **Mildew Resistant** - DuraCord® is produced with built in anti microbial blockers.
- **Colorfast** - Long exposure to sun will not fade the colors in this fabric. It is solution dyed which simply means the fibers cannot fade.
- **Fast Drying** - With 0.05 percent moisture regain, this fabric does not absorb water and therefore dries very fast.
- **Easy Care** - Cleaning is as simple as washing briskly with mild soapy water.
- **Bleach Resistant** - Bleach can be used for cleaning this fabric; it does not affect the fabric's color.
- **High Strength** - This is a truly light weight fabric with heavy-duty strength.
- **Environmentally Friendly** - DuraCord® offers an environmentally friendly alternative to other synthetic fibers as it requires less energy and water to manufacture.
